#### Disclaimers

When ordering two processors, the second processor must be the same as the first. Intel processor numbers are not a measurement of higher performance. Processor numbers differentiate features within each processor family, not across different processor families.

Multicore is designed to improve performance of certain software products. Not all customers or software applications will necessarily benefit from use of this technology. Performance and clock frequency will vary depending on application workload and your hardware and software configurations. Intel's numbering, branding and/or naming is not a measurement of higher performance.

#### NOTES:

- For details on the supported memory configurations on the HP Z8 G4 Workstation, please refer to the System Technical Specifications - System Board section of this document.
- Sleep (S3 state) support:
  - Sleep (S3 state) may not be supported with non-HP validated and qualified 64 GB LR DIMMs.
  - Sleep (S3 state) is not supported with 128 GB 3DS LR DIMMs
- You cannot intermix different types of memory. The system will not work if LR DIMMs, RDIMMs or 3DS LR DIMMs are intermixed.

DIMMs should be equally distributed across all six memory channels for optimal performance.

Each processor supports up to 6 channels of DDR4 memory. To realize full performance at least 1 DIMM must be inserted into each channel.

The CPUs determine the speed at which the memory is clocked. If a 2400MT/s capable CPU is used in the system, the maximum speed the memory will run at is 2400MT/s, regardless of the specified speed of the memory.

MT/s = Million Transfers per second

The Z8 G4 is designed to work ONLY with DDR4 memory. The system will not work with DDR3 memory.

**NOTE:** Factory-configured CTO (xxxxxAV) and aftermarket AMO (xxxxxAA, xxxxxAT) HP memory part numbers designated as "2666" may ship with "2933" or "3200" speed memory components. Similarly, HP Memory part numbers designated as "2933" may ship with "3200" speed memory. This does not affect HP part number availability, nor does it affect system performance or operation. All hardware configurations currently supporting HP memory part numbers designated as "2666" or 2933 have been fully qualified to work with fast speed memory and are fully supported by HP under standard support terms.

### Supported Components

**NOTE 1:** Supported only with Xeon 82xx, 62xx, 52xx and 4215/4215R processors.

- a. Available as factory configured in Memory Mode or Storage Mode.
- b. Systems configured with DCPMM memory will operate the memory subsystem at 2666 MT/s.
- c. Operating System Support:
  - i. Windows 10 Pro for Workstations v1903 or later with all updates applied.
  - ii. Linux OS support may be found in the [Linux Hardware Support Matrix](#).
- d. Detailed setup, security and support information may be found in the [Intel® Optane™ DC Persistent Memory: Configuration and Setup on HP Z6 G4 and Z8 G4 Workstation](#) white paper.
- e. DCPMM solutions require additional DRAM memory to be included in the solution:
  - i. Systems configured with DCPMM in Memory Mode will include DRAM memory to be used as cache. The amount of included DRAM memory is based on an 8:1 DCPMM to DRAM capacity ratio.
  - ii. Systems configured with DCPMM in Storage Mode will require DRAM System Memory to be ordered separately.
  - iii. DCPMM Memory will report approximately 2% less than advertised capacity .
- f. Total Memory (DCPMM + DRAM) per processor must be <= 1TB or 2TB per dual processor system.
  - i. Z8 G4 Note: “M” processors support a total memory limit < =2TB per processors or 4TB per dual processor system
  - ii. When Configured in Memory Mode, additional DRAM does not count against maximum processor memory.
- g. Maximum number of DCPMM modules in a Z8G4 is 6 per processor.
- h. Customer is responsible for additional required DRAM when adding DCPMM modules in Memory Mode.
- i. HP Z8G4 configured with some AMD Graphics are limited to 1TB of total DCPMM and DRAM memory. See AMD Graphics specifications for details.

**NOTE 2:** Requires 2<sup>nd</sup> processor option.

\*Actual speeds may vary. No support for DVD-RAM (DVD Writer). Does not permit copying of commercially available DVD movies or other copyright protected materials. Intended for creation and storage of your original material and other lawful uses. Double Layer discs can store more data than single layer discs. However, double-layer discs burned with this drive may not be compatible with many existing single-layer DVD drives and players.

With Blu-ray, certain disc, digital connection, compatibility and/or performance issues may arise, and do not constitute defects in the product. Flawless playback on all systems is not guaranteed. In order for some Blu-ray titles to play, they may require a DVI or HDMI digital connection and your display may require HDCP support. HD-DVD movies cannot be played on this workstation.

**NOTE:** The 1125W (1450W at 200V Input Voltage) power supply can also supply 1275W of output power when the input voltage is greater than 105V. If the input voltage is less than 105V, but greater than 90V for any reason, the maximum power that can be drawn is 1125W. An uninterruptible power supply (UPS) is highly recommended if 1275W output power is desired.

The 1125W Power Supply can also supply 1450W of output power when the input voltage is greater than 180V under all conditions.

**NOTE:** The 1450W (1700W at 200V Input Voltage) power supply can also supply 1550W of output power when the input voltage is greater than 105V. If the input voltage is less than 105V, but greater than 90V for any reason, the maximum power that can be drawn is 1450W. An uninterruptible power supply (UPS) is highly recommended if 1550W output power is desired.
